

JNJ INDUSTRIES

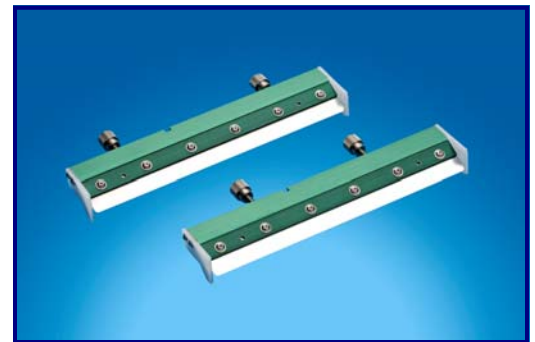

DEK PRINTER ACCESSORIES

All JNJ Squeegee & Roll Products are Proudly Made in the USA

Standard DBHT Style

Standard squeegee holders are gold anodized and our "Lead-Free" squeegee holders are green anodized for ease of visual identification. Lead Free metal blades are etched with the words "Lead-Free" on the front of the blade. Add the letters "-LF" to the end of the JNJ part number to designate "lead-free" squeegee holders, metal blades, or assemblies

DBHT-LF Style

AVAILABLE NOW! CALL OR E-MAIL FOR PRICES & LEAD TIMES

JNJ Industries, the industry leader in stencil printer accessories and SMT production supplies, offers a line of printer accessories for most models of DEK stencil printers from DEK Printing Machines Ltd.. The product line includes standard length under stencil rolls, higher capacity stencil rolls, squeegee blade holders for both metal and polyurethane blades, metal squeegee blades, and polyurethane squeegee blades. In addition to the standard sizes that are offered from DEK, we also offer custom size rolls and squeegees, made to customer specifications. Most DEK printers use stencil rolls wound on plastic core tubes that are 530mm long (20.87") with a 3/4" inside diameter. Some of the older models of the DEK printers require the cores to have notches cut in one end, and others require a sensor window to be cut out of the wiper roll material as the roll becomes empty. Stencil rolls can be slit to specified widths or made with more or less linear feet of material, and are available in two different basis weight lint free non woven fabrics that will best suit your specific printing requirements.

Most DEK printers use the same style squeegee holders and blades, with the squeegees having mounting knobs located on the top of the squeegee holder. Both metal and polyurethane blades require mounting screw holes that are used to mount the blade to the holder. JNJ DBHT style DEK squeegee holders are available with two different thickness clamp bars so the same holders can accommodate both metal and polyurethane blades. DEK squeegees come in metric sizes, with standard lengths ranging

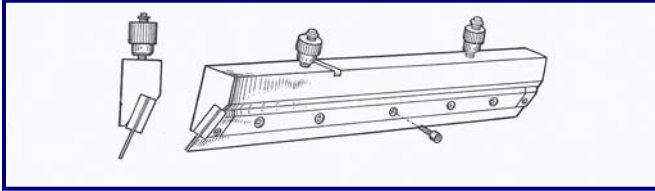

from 170mm (6.69") up to 535mm (21")., but we can make them up to 610mm (24") or larger. DEK printers can be equipped with blades that have a 6mm overhang or a 15mm overhang, with the 15mm overhang being the more common and are considered "standard". JNJ metal blades feature a proprietary ball radius along the edge of the blade for uniform paste deposition, reduced stencil wear, and long blade life. Our stainless steel blades are plated with the patented Electrolyzed plating that aids in solder paste release for optimum print deposition while also making clean up faster and easier. Polyurethane squeegee blades are available in durometers ranging from 60 to 100 and can also be cut to custom heights and lengths or with custom angles. Custom rolls and squeegees require a factory quote, but more often than not,

custom products do not affect the standard lead time. Sold through distribution, many products ship from our factory, but we can drop ship direct to your facility at no additional charge, only standard freight charges will apply.
