July 1, 2017

To: All JNJ Distributors and Customers

Subject: RoHS Directive 2015/863 was published in 2015 by the EU, which is known as RoHS 3

This letter is to certify that JNJ Industries products are in full compliance with the EU regulations as they pertain to RoHS, and they do not contain any of the following substances as described in the European Union Directive 2002/95/EC that went into effect in July 2006, and any of the subsequent updates, as detailed below:

RoHS specifies maximum levels for the following 10 restricted materials. The first six applied to the original RoHS while the last four were added under RoHS 3.

Lead (Pb): < 1000 ppm

Lead is commonly used in the electrical and electronics industry in solder, lead-acid batteries, electronic components, cable sheathing and in the glass of cathode-ray tubes.

Mercury (Hg): < 100 ppm

Mercury is widely used metals in the production of electrical and electronic appliances and is concentrated in batteries, switches and thermostats, and fluorescent lamps.

Cadmium (Cd): < 100 ppm

Cadmium is used in electronic equipment, car batteries, and pigments.

Hexavalent Chromium (Cr VI) < 1000 ppm

While some forms of chromium are non-toxic, Chromium VI can produce toxic effects.

Polybrominated Biphenyls (PBB): 1000 ppm

These are flame retardants found in electronic and electrical appliances. They have been found in indoor dust and air through evaporation from plastics.

Polybrominated Diphenyl Ethers (PBDE): < 1000 ppm

These are also flame retardants found in electronic and electrical appliances. Combustion of printed wiring boards release toxic emissions.

Bis(2-Ethylhexyl) phthalate (DEHP): < 1000 ppm

These are used to soften PVC and vinyl insulation on electrical wires.

Benzyl butyl phthalate (BBP): < 1000 ppm

These are used to soften PVC and vinyl insulation on electrical wires.

Dibutyl phthalate (DBP): < 1000 ppm

These are used to soften PVC and vinyl insulation on electrical wires.

Diisobutyl phthalate (DIBP): < 1000 ppm

These are used to soften PVC and vinyl insulation on electrical wires.

Furthermore, JNJ Industries products are not manufactured or packaged with materials that contain any of the substances listed below:

Asbestos, Azo colorants, Arsenic, Arsenic Compounds, Benzidine and its salts, Benzopyrene, Cadmium, Cadmium Compounds, Creosote, Decabromo diphenyl ether, Formaldehyde, Halogenated aromatic substances, Halogenated diphenyl methanes, Hexachlorobutadiene, Hexachloroethane, Hexavalent Chromium/Hexavalent Chromium Compounds (in paint or plastic), Lead, Mercury, Mercury Compounds, Nickel, Ozone Depleting Substances (such as CFC's, HCFC's, HBFC's, Freon), Pentachlorophenol, Perfluorocarbons (PFC's), Perfluorooctane Sulfonate (PFO's), Polybrominated Biphenyls (PBB's), Polybrominated Diphenylethers (PBDE's), Polychlorinated Biphenyls (PCB's), Polychlorinated Terphenyls (PCT's), Tetrabromobisphenol A (TBBP-A), Toluene (CAS No. 108-88-3), Tris (2,3 dibromopropyl) phosphate (CAS No. 126-72-7), Tris (aziridiny) – phosphineoxide (CAS No. 545-55-1).

Although the RoHS directive is a European directive, JNJ Industries, being a global supplier of electronic production supplies has elected to comply fully with this directive. To the best of our knowledge, no product sold under the JNJ Industries or GlobalTech trade names contain any of the hazardous substances listed in the directive.

Signed:

John J. Volpe
